

PIZZAHUT SALES ANALYSIS

This presentation explores the analysis of pizza sales data to uncover insights and identify opportunities for improvement. I have used the tools MySQL workbench for querying and analysis and canva for presentation, by examining sales trends, customer preference, and other key metrics, we can optimize operations, enhance customer satisfaction, and derive revenue growth, which will help to the pizzahut company.

Introduction to the Dataset

Pizza Sales Dataset

There are 4 datasets (Tables)

- 1) orders
- 2) order_details
- 3) Pizzas
- 4) Pizza types

Key Fields

- order ID
- order Date
- pizza Type ID
- pizza ID
- category
- price
- Quantity
- Name

Retrieve the total number of orders placed.

[Home](#)[About](#)[Contact](#)

SELECT

COUNT(order_id) AS total_orders

FROM

orders;

Result Grid

03

total_orders

21350

Calculate the total revenue generated from pizza sales.

[Home](#)

[About](#)

[Contact](#)

```
SELECT
    ROUND(SUM(order_details.quantity * pizzas.price),
          2) AS total_revenue
FROM
    order_details
    JOIN
    pizzas ON pizzas.pizza_id = order_details.pizza_id
```

Result Grid

total_revenue

817860.05

\$30

Identify the highest-priced pizza.

[Home](#)[About](#)[Contact](#)

```
SELECT
    pizza_types.name, pizzas.price
FROM
    pizza_types
    JOIN
    pizzas ON pizza_types.pizza_type_id = pizzas.pizza_type_id
ORDER BY pizzas.price DESC
LIMIT 1;
```

Result Grid

Filter Row

	name	price
	The Greek Pizza	35.95

Identify the most common pizza size ordered.

```
SELECT
    pizzas.size,
    COUNT(order_details.order_details_id) AS order_count

# Conclusion

The Pizza Sales Analysis provided useful insights into sales performance, customer preferences, and business trends. Using SQL queries, we analyzed total revenue, total orders, total pizzas sold, average order value, popular pizza categories, and sales trend.

Key conclusions:

- Identified the pizzas and categories generating the highest sales and revenue.
- Analyzed the busiest days and times to understand customer ordering patterns.
- Compared sales across different pizza sizes and categories.
- Identified top-performing and low-performing pizzas.
- These insights can help the business improve inventory planning, promotions, menu decisions, and overall sales performance.

Overall: The analysis demonstrates how SQL can be used to transform raw sales data into meaningful business insights and support data-driven decision-making.

**Thank You !**
